

Installation Guide

The installation of PoolParty is rather simple. Before you begin, please make sure your server meets the system requirements defined in the [PoolParty System Requirements](#) document. Then make sure you have configured your server to meet the following requirements:

- An OpenJDK 11 or a Sun/Oracle Java 11 SE Development Kit is installed.
- A user (e.g. "poolparty") is defined on the server, which should be used to run the Apache Tomcat 9 web application server.

The PoolParty Installer is shipped with a preconfigured Apache Tomcat 9 web application server.

The following guides give step-by-step instructions for the installation of PPT:

- [Installation Guide \(Linux\)](#)
- [Installation Guide \(Microsoft Windows\)](#)
- [Enable GraphDB](#)
- [Deploy the PoolParty Linguistic Service Webapp \(Windows\)](#)
- [Install and Configure Additional Extractor Instance for High Availability \(Linux\)](#)
- [Install and Configure Additional Extractor Instance for High Availability \(Windows\)](#)
- [Install and Configure Additional Extractor Instance for High Availability \(Linux\) pre 5.5](#)
- [Install and Configure Additional Extractor Instance for High Availability \(Windows\) pre 5.5](#)
- [Install and Configure PoolParty GraphViews](#)
